

RMADS accreditation

On the 17th September IPSA achieved full RMADS accreditation of its information systems in accordance with HMG Information Assurance (IA) Guidance Standard No 2, Risk Management and Accreditation of Information Systems. Risk Management Accreditation Document Set (RMADS) requires an accredit or to make an impartial decision that all risks to IPSA's information system are appropriately mitigated. Accreditation of our systems provides confidence that risks to information & communications systems are being properly managed.

This assurance is maintained to the risk profile throughout the service life of the information system by regular post implementation IA reviews, which also constitute best business practice. As a minimum condition of continuing accreditation, full verification and validation testing will be carried out at least once a year.
